

MONTANA'S AUTOMATIC TRAFFIC COUNTERS

2002

PREPARED BY THE MONTANA DEPARTMENT OF TRANSPORTATION
TRAFFIC DATA COLLECTION SECTION

IN COOPERATION WITH THE U.S. DEPARTMENT OF
TRANSPORTATION FEDERAL HIGHWAY ADMINISTRATION

INTRODUCTION

This report contains a brief, concise summary of traffic patterns at each of the 83 continuous automatic traffic recorders located on Montana highways, that were in operation during 2002. The traffic volumes for each month and day of the week are compared to average daily traffic for the year. The percentage of large commercial trucks (48' - 106' in length or classes 8-13) is included for each rural counter that had a complete year of data.

Calculated for each of the counters are the highest, the 10th, 20th, 30th, 50th, and 100th peak hour traffic volumes that occurred during each year. These peak volumes are listed as a percentage of the average daily traffic. These percentages are compared to previous years of historical data to determine reliability and accuracy.

The 83 counters are distributed by Functional Class as follows:

17 on Interstate Principal Arterial Rural	4 on Minor Arterial Urban
5 on Interstate Principal Arterial Urban	8 on Major Collector Rural
27 on Principal Arterial Rural	2 on Collector Urban
8 on Principal Arterial Urban	1 on Local Rural
11 on Minor Arterial Rural	

30th Highest Hour

The American Association of State Highway & Transportation Officials (AASHTO) decided it was not practical to design for the average daily traffic or the highest traffic that occurs during the year. If highways were designed for the average daily traffic, there would be times when the movement of vehicles would surge far above the average. If designed for the highest traffic volume, such conditions would occur only once or twice a year. Upon thorough investigation, it was agreed that the 30th highest hour would be a feasible traffic volume for design purposes. This particular hour is known as the Design Hour Volume (DHV), or the 30th maximum hour, and is to be used as the criterion for the design of the "National System of Interstate Highways". It is also now used in the design of Non-Interstate NHS, Primary, and Secondary highways in Montana.
